

SDG-ABLE SCHOOL

- **Progetto Erasmus KA 229**

Milva L. Crimella

SDG-ABLE SCHOOL

**Schools that promote sustainable development.
European project: Italy, Croatia, Poland, Romania,
Spain.**

**Preparation of materials related to sustainable
development.**

**Remote meetings and events on the meet platform
with partner countries.**

5-day trip abroad in one of the participating countries.

SUSTAINABLE DEVELOPMENT AND THE 2030 AGENDA

CIVIC EDUCATION: environmental education, knowledge and protection of heritage and the territory

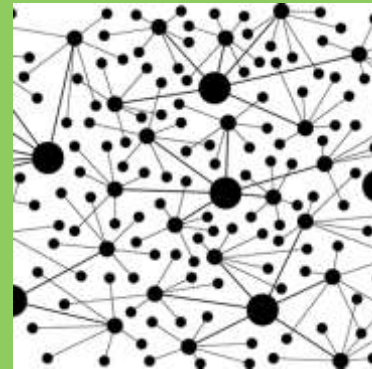

OBJECTIVES 2030 5 P policy: People, Planet, Peace, Prosperity, Partnership

AGENDA 2030

BRAINSTORMING

WHAT ABOUT YOUR SCHOOLS ?

Milva L. Crimella

WHAT DO WE MEAN BY SUSTAINABLE DEVELOPMENT?

Today the concept of sustainable development has evolved and consists of a virtuous balance between three dimensions: the economic, the environmental and the social. In the 2030 Agenda, these three dimensions are integrated with the five P's approach: People, Planet, Prosperity, Peace, Partnership.

FROM THE WWF IN ITS "LIVING PLANET REPORT" 2019:

1. learn to live within the limits of a single planet;
2. sustainable development is the ability of our species to be able to live, in a dignified and equitable way for all, while respecting the environment;
3. do not destroy the natural systems from which we draw the resources to live;
4. do not exceed the ability of the environment to absorb waste and waste due to our production activities.

WHAT IS THE 2030 AGENDA FOR SUSTAINABLE DEVELOPMENT?

The 2030 Agenda tells us about the unsustainability of the current development model and tells us that sustainability is not just an environmental issue, but sustainability requires a broad vision of development (economy, environment, society, institutions).

PROJECT held and organized by Prof. essa Bertoletti

RECYCLING

Alessandro

Many schools use recycled materials to make items and gifts.

Now we show some of those gifts and items.

Milva L. Crimella

In all classes there are baskets for separate collection, they are divided into 3 colors: green for the organic, yellow for the paper and blue for the plastic.

In our country, usually, is carried out the home collection. In the home collection comes to your home a garbage truck that will collect the trash. At home, every citizen has a calendar where are reported the days in which the workers will collect the trash.

Deplastification

NO

YES

Ilaria

DEPLASTIFICATION

Our school favors the use of objects that do not contain plastic such as: our water bottles instead of plastic bottles or bring snacks without the plastic packaging.

Even in our homes we try not to use many plastic objects. We use tablecloths, metal cutlery, glass glasses and reusable crockery.

SAVE THE WATER!

In the towns where we live, we have available free water dispensers; in order not to pollute and not use too many plastic bottles.

THE WATER IS LIFE,
DON'T WASTE IT.

Ilaria

Slow mobility and respect for the territory

In Valtellina, there are cyclable paths that cross the valley and our country. From here, you can admire the wonderful landscape of the valley. There are also many eco-sustainable activities with bicycles or sport activities

This is the fitness park

that's the Valtellina path

this is the Valtellina path

that's the pump track

Erasmus+

To protect environment, some schools organize trees festival in which all children participate.

Sharon

In many of our woods there are protected and beautiful trails open to all, for being outdoors

Renewable energy

Our school promotes some initiatives on renewable energy by explaining to children how they work and by going to visit them. There are three hydroelectric power plants around our country that you can visit.
